

30hands Mobile is an app that allows teachers and students to easily create Presentations and Picture Stories from mobile devices.

To create a story or presentation, follow these simple steps:

1. Click the + to create a new presentation/project
2. Type in a Title
3. Click "Add Slides" to select pictures from your camera roll or to take a photo. The images are added to the slide desktop. Photos and images can be added at any time by clicking on the camera icon in the lower left corner.
4. Once you have your pictures on the desktop, you can easily rearrange them by touching and holding an image until the icons wiggle. Drag the images around to the order you want. Click "x" to delete an image (this will not delete the image from your camera roll).
5. If you have more than 9 images, the desktop will have multiple pages. The dots on the bottom will indicate which page you are on. You can drag and drop between pages, too.
6. When you think you have the images in the order you want, click the red "Begin Recording" button or click on any image to go into Preview/Record mode. Here, you can swipe between the slides. When ready, click the red record button to record audio for a slide. Click the play button to hear the audio for that slide.
7. Page to the next slide with a swipe and record the audio for that slide. Clicking on the red record button again will ask if you want to replace the audio with new audio.
8. Once you have audio on your presentation, you can click the big Play button from the slide desktop to play through the complete presentation. In this mode, the presentation will automatically page forward. You can also navigate to any slide and start playing from there.
9. When you are ready to publish your story or presentation, click the Action button and "Save to Camera Roll". This will turn your presentation into a video that you can watch and share.
